Han Sun, PhD

hanicesun@gmail.com • LinkedIn • GitHub • 408-800-1190

Senior computational biologist with 10+ years at Stanford University applying AI and multiomics to uncover disease mechanisms. Builds deep learning models on genomic data and integrates human genetics with functional genomics to prioritize causal genes and therapeutic targets in diabetes, cardiomyopathy, and cancer. Author of 30+ publications and co-inventor on a treatment-methods patent, with a track record of carrying computational hypotheses through wet-lab validation.

EXPERIENCE

Part-time Consultant at a Liquid Biopsy Startup 2026 – Present

Support computational pipeline development and evaluate emerging AI models for early cancer detection.

Research Scientist / Senior Computational Biologist 2020 – Present

Department of Pediatrics, School of Medicine, Stanford University, **Prof. Anna Gloyn**

Postdoc 2015 – 2019

Department of Genetics, School of Medicine, Stanford University, **Prof. Lars Steinmetz**

EDUCATION

PhD, Bioinformatics 2009 – 2014

University of Chinese Academy of Sciences, **Prof. Yixue Li** and **Prof. Lu Xie**

Bachelor, Software Engineering 2004 – 2008

East China Normal University

SKILLS

- **Multiomics for identifying causal genes/variants and understanding disease mechanisms**: genomics (WGS, WES, arrays), transcriptomics (RNA-seq, scRNA-seq), proteomics (MS/MS), epigenomics (ATAC-seq, ChIP-seq, WGBS), immune repertoire profiling (TCR-seq/BCR-seq), HLA typing and imputation, linkage analysis, QTL mapping, and GWAS
- **Artificial intelligence for target identification and drug discovery**: machine learning (scikit-learn; linear and generalized linear models, support vector machines, random forests; cross-validation) and deep learning (PyTorch, TensorFlow; CNN, RNN, ResNet, Transformer, GPT; pre-training, fine-tuning, and transfer learning; agentic AI)
- **Programming and computing**: Python, R, C/C++, FastAPI/FastHTML, high-performance computing (HPC), and cloud computing
- **Bioinformatics and biostatistics**: BLAST, BWA, STAR, GATK, Scanpy, Seurat, Conda, Docker/Singularity, Snakemake/Nextflow; hypothesis testing, confidence intervals, power calculation, and Bayesian inference

PACKAGES AND CERTIFICATIONS

- **Python packages developed**: gap, hlarchical, omniQTL, spredle, deepSec, and dustle
- **Machine Learning Specialization** (Andrew Ng), Stanford University & DeepLearning.AI, 2022

- **Deep Learning Specialization** (Andrew Ng), DeepLearning.AI, 2022
- **Fundamentals of Deep Learning**, NVIDIA Deep Learning Institute, 2022

PROJECTS

Multiomics integration to study disease mechanisms in cancer, cardiomyopathy, and diabetes

- Identified disease-causing somatic/germline mutations, gene fusions, and splicing events (potential drug targets) from whole-genome, whole-exome, and RNA sequencing data.
- Analyzed bulk and single-cell RNA-seq/ATAC-seq, ChIP-seq/CUT&RUN, WGBS, and MS/MS data across dozens of projects to characterize disease-associated genes and pathways.
- Built unified QTL mapping pipelines across multiple omics data types (eQTL, sQTL, pQTL, and caQTL) and integrated QTL signals with GWAS data through colocalization and Mendelian randomization analyses (omniQTL).
- Led collaborations with wet-lab colleagues to validate findings using CRISPR/Cas9 editing, iPSC and mouse models, RT-PCR, Sanger sequencing, qPCR, and phenotyping assays.

Artificial intelligence to predict genetic ancestry, HLA types, and functional elements from DNA sequences

- Developed machine learning models to accurately predict genetic ancestry from genotyping data (gap).
- Implemented hierarchical, mixture-of-experts (MoE), and multi-task deep learning models for HLA imputation (hlarchical).
- Reproduced the SpliceAI model and extended it with Transformer and Hyena architectures for both splice site and usage prediction (spredle).
- Applied deep learning models to predict selenocysteine (the 21st amino acid) sites (deepSec).

PATENTS

- Methods of Treatment, Genetic Screening, and Disease Models for Heart Conditions Associated with RBM20 Deficiency. Francesca Briganti, Lars M. Steinmetz, **Han Sun**, and Wu Wei. WO 2020/092171.
